

# **Master in Digital Project Management & Digital Strategy**

LLM & Ecology

**What is the environmental impact of large language models (LLMs),  
and how can these same models be leveraged to reduce global  
carbon footprints?**

Thomas Planchard  
Academic Year 2024-2025

Introduction .....	1
--------------------	---

## **CHAPTER 1 – Large Language Models (LLMs)**

Definition and Core Architecture .....	1
Evolution and Key Milestones .....	2
Capabilities and Applications .....	3
Toward Environmental Impact .....	4

## **CHAPTER 2 – Current Methods and Standards for Measuring the Environmental Impact of Computing**

Measuring Energy Consumption in Computing.....	5
Data-Center Overhead and PUE .....	5
Life-Cycle Considerations .....	5
Converting Energy Use to CO <sub>2</sub> -Equivalent Emissions .....	6
Emission Factors and CO <sub>2</sub> e Calculation .....	6
Origins and Adoption of the GHG Protocol .....	7
Legal Frameworks Referencing the GHG Protocol .....	7
Beyond Carbon .....	8
Tools and Frameworks for Carbon Accounting in Computing .....	9
Software Instrumentation Libraries .....	9
Carbon Calculators .....	9
Cloud Provider Sustainability Tools.....	10
Cross-Provider and Third-Party Frameworks.....	11
Observations and Limitations.....	12
Standards and Protocols for Environmental Impact Measurement .....	12
Application of These Methods and Standards to AI and LLMs .....	13
Training Phase Footprint .....	13
Inference and Deployment Footprint.....	15
Using Standards in Practice.....	16
Challenges and Evolving Practice .....	16

## **CHAPTER 3 – Carbon Footprint of ChatGPT vs. LLaMA Models**

Training Phase: Energy Use and CO <sub>2</sub> Emissions.....	16
GPT-series (OpenAI) .....	16
LLaMA-series (Meta) .....	18
Scaling to Newer Models .....	19
Inference Phase: Energy Consumption and Life-Cycle Impact.....	21
Architecture and Hardware Factors .....	21
Infrastructure and Deployment Differences.....	22

## **CHAPTER 4 – Reducing the Carbon Footprint of Large Language Models**

Model Efficiency and Compression Techniques .....	23
Hardware and Infrastructure Optimizations .....	24
Carbon-Aware Computing Practices .....	25
Reusing Models and Emerging Approaches .....	26

## **CHAPTER 5 – Leveraging Large Language Models to Reduce Carbon Footprints**

Energy Management and Grid Operations.....	27
Corporate Carbon Accounting and Product Footprints .....	28
Climate Information and Decision Support .....	29
Making LLMs Themselves More Sustainable.....	31

## **CHAPTER 6 – Companies and the Integration of Large Language Models**

Overview of Industry Adoption.....	32
The Startup Ecosystem and API-Native Business Models .....	33
Retrofit Projects in Established Enterprises .....	33
Regional and Sectoral Variation .....	34
Practitioner Perspective: Insights from an Industry Interview .....	34
Sustainability rarely drives AI adoption .....	34
Data-governance rules often dictate model choice .....	34

Carbon accounting is not yet requested .....	35
Implications .....	35
Discussion: Toward Sustainable Corporate AI .....	35

## **CHAPTER 7 – Conclusion**

Personal Reflection .....	37
---------------------------	----

<b>Bibliography</b> .....	38
---------------------------	----
